This Trade Waste and Associated Products Catalogue illustrates selected products from our product range

It contains details of effluent and process control units suitable for industrial, commercial and domestic applications. These include grease and oil interceptors, neutralizing tanks, settling tanks, silt pits, pump pits and more conforming to the appropriate water board requirements.

An extensive range of stock cast iron access covers and galvanised steel grates and the capacity to concrete encase these units provides our customers a full range of solutions to their project needs

Value to our clients is enhanced by our ability to provide a custom design and manufacture service. This is supported by a team of representatives and technical advisers who can identify client needs and generate problem-solving ideas. Cost effective solutions are an essential component of client satisfaction.

S.V.C are committed to producing quality product. As part of the process of establishing client requirements, we provide drawings of standard and custom products. These detail unit dimensions, unit mass, included fittings and any other information, which will give the client a clear understanding of what will be provided.

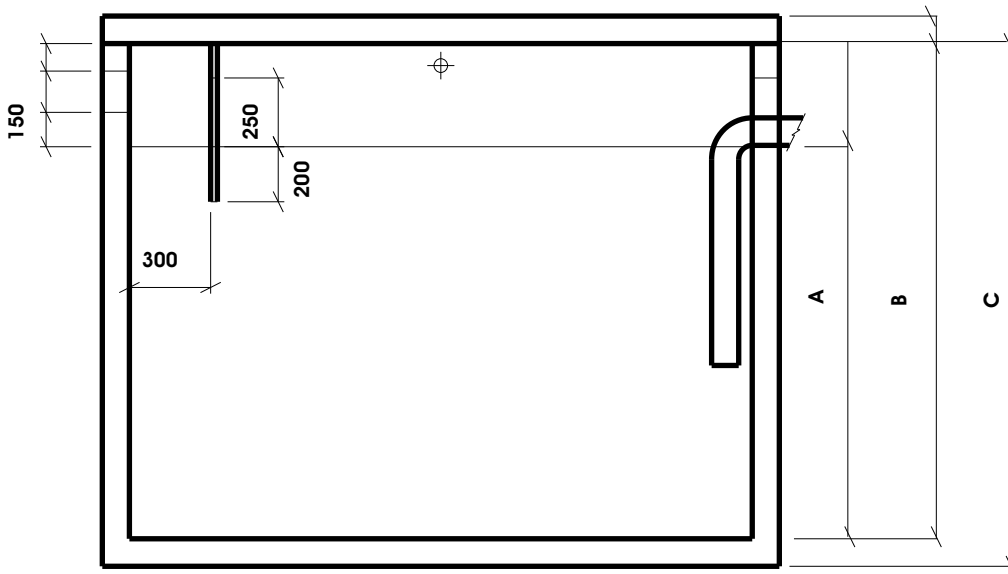

Covers can be supplied in a variety of sizes, patterns and materials to meet all access and inspection requirements. Steel grates and cast iron Access covers complement precast concrete covers. These metal products are Quality Assured to AS/NZS ISQ 9002 and meet the requirements of Australian Standard AS3996.
